Bramha Atlas

Which mutation should we investigate next, and why?

Reviewable research, connected to evidence.

OPEN THE PTEN DEMO →

ACTUAL REFERENCE WORKSPACE / PTEN · 1D5R

The next experiment starts with an evidence decision

One researcher.

Competing explanations.

Limited lab capacity.

MEASUREMENTS

What did each assay measure?

STRUCTURE

Can this position be mapped?

LITERATURE

Does the cited passage apply?

The proposed job: assemble a research decision with evidence and explicit unknowns.

From a question to a brief you can check

01

Ask

Declare the question and selected records.

02

Inspect

Check identity, assay meaning and coverage.

03

Investigate

Run applicable tools and scoped reviews.

04

Review

Inspect evidence, limits and follow-up.

THE OUTPUT

A checked research brief + reproducible artifacts + unresolved questions

Three real substitutions. One bounded question.

C124S

Paired measurements

Activity and abundance are both available.

R172H

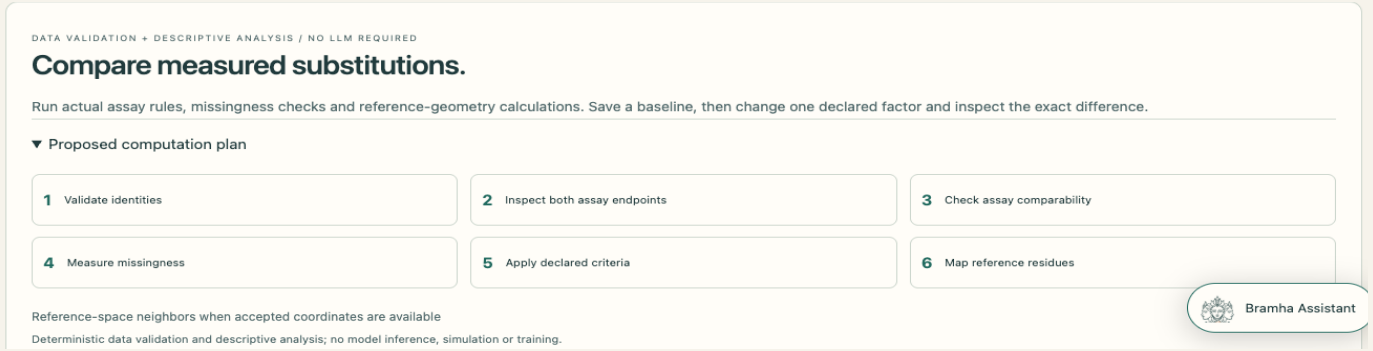

A missing observation

Activity is available; abundance is missing.

Y16T

A different profile

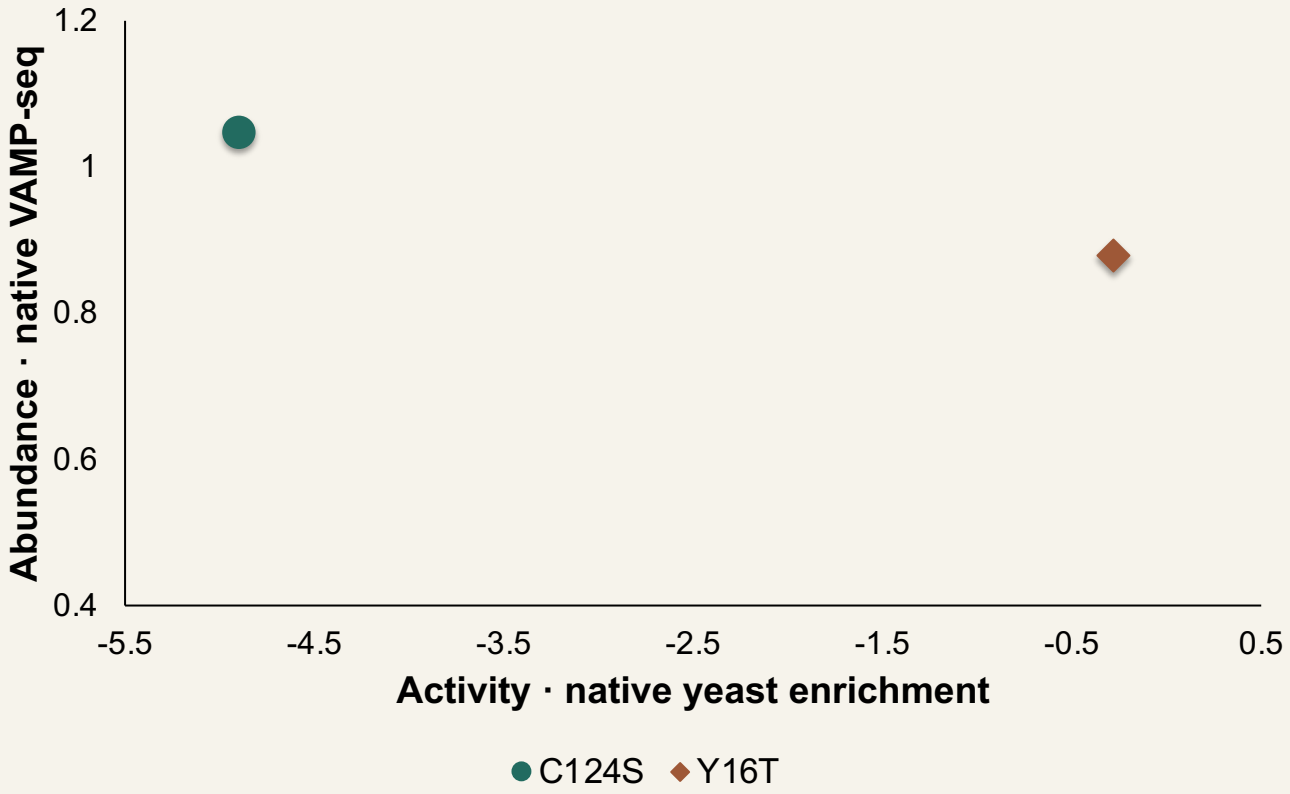

Paired measurements; excluded by baseline rule.

Which profiles meet our rule?

What remains unresolved?

Two assays answer different questions

Variant	Activity	Abundance
C124S	-4.896	1.047
R172H	-0.090	Missing
Y16T	-0.282	0.879

2 of 3 have both values.

Missing stays unknown.

Public MaveDB measurements · pinned PTEN snapshot · no cross-assay normalization

A mapped position gives context, not causation

P60484 → 1D5R

Identity checked

Accepted reference-to-chain mapping.

Coordinates inspected

All three selected positions are mapped.

Boundary preserved

The mutant structure was not computed.

Change one rule. See exactly what changes.

deterministic tool calls

RECORDED RUN · ARGON UNVERIFIED

The useful result includes the unknowns

SUPPORTED BY THE BASELINE

C124S meets the declared paired-measurement rule.

A descriptive shortlist for scientific review.

Still unresolved

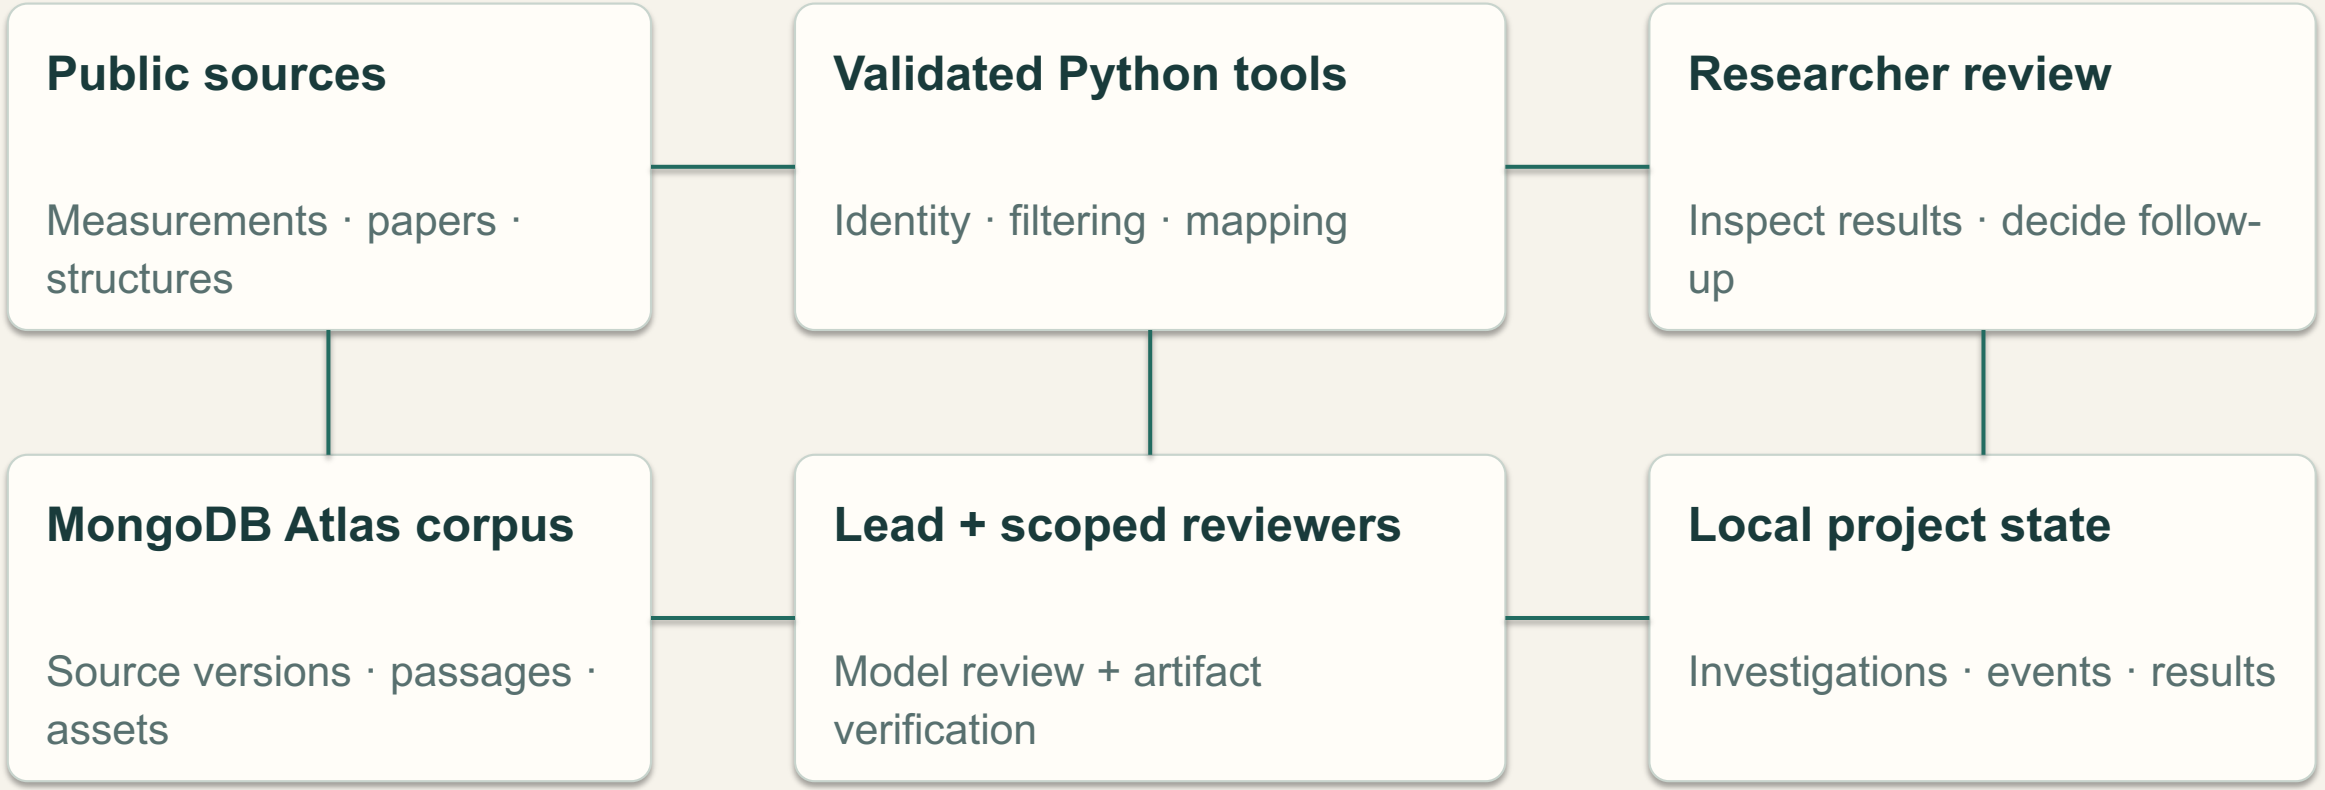

R172H: abundance is missing.

Mechanism and disease relevance
are not established here.

NEXT QUESTION

What additional applicable evidence could distinguish the competing explanations?

Connected evidence, explicit storage boundaries

Contextual assistant: source-linked guidance alongside the investigation.

A prototype with evidence you can inspect

Capability	Evidence in hand	Status
PTEN analysis	Pinned baseline + one-factor follow-up	Demonstrated
Independent reviews	Saved model-backed team run	Recorded; with limits
Public corpus	Atlas connection + stored records	Snapshot verified
Argon scientific run	Connectivity attempt timed out	Unverified
Clinical or causal validity	No qualifying validation in this case	Not established

480 studies / 4,784 passages

Recorded Atlas snapshot · 25 Oct 2026, 05:47 UTC

Start with teams making variant research decisions

01

Academic genomics labs

Review variant evidence before choosing a follow-up experiment.

02

Small biotech teams

Connect measurements, structure and source review in one record.

FIRST PILOT JOB

A reviewed shortlist and a traceable next research question.

A focused workflow in an established ecosystem

Existing tool	Established focus
Benchling	R&D workflows, context and agents
Galaxy	Reproducible computational workflows
MaveDB	Variant-effect datasets and interpretation
Europe PMC	Life-science literature discovery

$3.65B

2024 global drug-discovery informatics estimate

Broad category context
Grand View Research
Not our addressable market

Our proposed focus: one inspectable decision, from declared criteria to unresolved evidence.

Charge for a bounded research workspace

Individual researcher

US$30 / month · proposed

Bounded usage; validate with pilots.

Small laboratory

US$300 / month · proposed

Shared review workflow; bounded usage.

20 labs × $300 / month × 12

= $72,000 / year

ILLUSTRATIVE · NOT TRACTION

Pilot the decision, then earn expansion

01 Partner

Recruit 3–5 labs.

Agree on a bounded question.

02 Evaluate

Expert review + task success.

Measure time and errors.

03 Expand

Validate the next gene.

Test repeat use and lab fit.

What earns the next stage?

Traceable results. Useful unknowns.

Researchers who return.

Help shape a research decision worth trusting

Bring one research question.

Seeking pilot labs and scientific advisers.

01

Verify Argon execution

02

Evaluate with researchers

03

Validate gene expansion
